

Why Should This Solution Be Selected?

ASTRA: Assessment Security, Telemetry & Resilience Architecture

Failures pause. Exams don't.

No answers lost · no minutes lost · continue on any PC · a clear record of everything

Seven reasons

1 · Built from real failures

We studied 18 digital exam failures from 2009 to 2026, including 3 in MP **MP**, and found 6 common causes. Every feature fixes one of them.

2 · Covers the whole exam journey

All 12 abilities asked for, across Prevention → Detection → Response → Recovery → Trust. It isn't a single feature.

★ 3 · A simple, new idea

A tiny locked backup of every candidate's exam, plus centres that don't need the internet, means most failures **no longer lead to cancellations**.

★ 4 · AI that is fast and safe

Fast AI inside the centre predicts and sorts problems in milliseconds, even offline. Assistant AI explains. **The exam never waits for AI, and AI never acts alone.**

★ 5 · Safe from inside misuse

We studied about 80 ways to attack the system. The centre server works like a **courier with a sealed envelope**: it can't open or change answers. Sensitive actions need two people.

6 · Builds trust

Candidates hear what's happening within 30 seconds, get back exactly the time they lost, receive a receipt for their answers, and only affected candidates are re-tested.

7 · Practical and affordable

Free, open-source software with no licence fees. Works with any exam company, runs on ordinary computers, and is introduced step by step.

🎯 Easy to measure

0 answers lost · 0 minutes lost · first message in under 30 seconds · decisions in minutes · repeat problems flagged before the next exam.

ASTRA makes the exam the one thing that doesn't stop, and gives every candidate proof that it didn't.
